

Notary System

The Notary System is a Flask-based application. It is designed for efficient document management and notarization. This presentation will cover key functionalities. These include signup, login, document management, and notary features.

Signup and Login

Signup

Create a user or notary account. Provide a username, email, and secure password.

Login

Securely access your personal dashboard.
Manage your documents and notarization tasks.

Dashboard Document Management

1 Dashboard

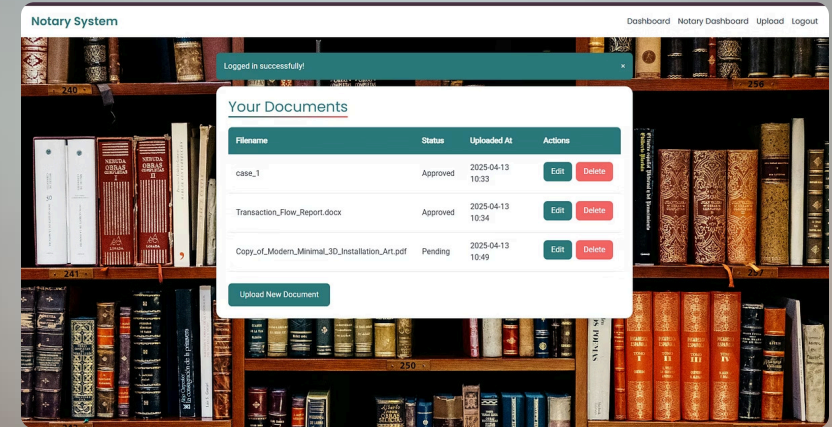

View your documents in a table format. Includes filename, status, and upload date.

2 Edit

Update document filenames or replace files via a simple form.

3 Delete

Remove documents. A confirmation prompt ensures intentional deletion.

Notary Dashboard Functions

1

View Pending

See all pending documents from users awaiting notarization.

2

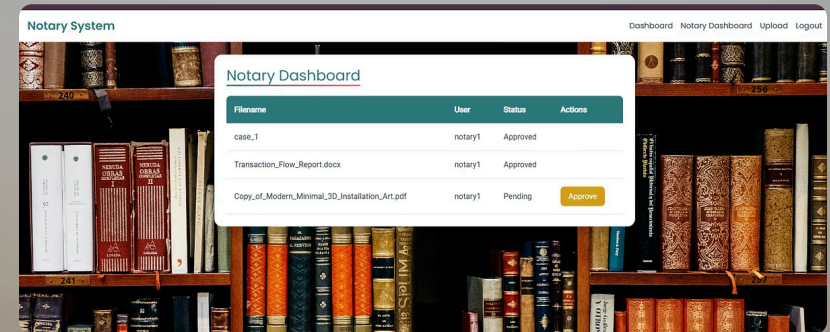

Assign Cases

Take ownership of a document for notarization.

3

Approve Documents

Update the document status upon successful notarization.

Upload Document

File (PDF, DOC, DOCX)

Choose File No file chosen

Upload

Effortless Document Upload

Navigate

Go to the /upload page to begin the process.

Select File

Choose a file (PDF, DOC, DOCX) from your device.

Submit

Upload the file to the Notary System for processing.
